

Acoustic Metal Magic

NoiseOut Metal Magic is a highly engineered material that combines advanced sintering procedures with fine grain metal processing to create a rigid panel that is durable, strong, and highly absorptive. Sintering is a process that allows the metal particles to fuse together at a temperature lower than the melting point. This process creates a highly porous panel; its porosity is what allows it to absorb sound.

Applications:

- Dining Areas
- Lobbies
- Conference Rooms
- Home Theatres
- Recording Studios
- Mechanical Rooms
- Equipment Closets

Installation:

To install Metal Magic, first you must put in place a standard drop ceiling grid system. Once the grid system is up in the desired configuration, run a bead of adhesive around the inside of the grid. Slide the Metal Magic panels into place just as you would a normal ceiling tile.

Physical Properties:

Panel Size:	2' x 2' or 2' x 4'
Thickness:	2.5mm or 3mm
Weight:	1 lb/ft ² @ 3mm thick
Fire & Smoke Rating:	Fire Spread Index - 5 Smoked Developed Index - 0

N.O. Units:

Small 2' x 2':	2 Units
Large 2' x 4':	5 Units
