

## Paradise Foam Basic

Paradise Foam Basic Panels are a high performance absorber designed to reduce reverberation in an enclosure. These panels are fiber-free and anti-microbial. The flat design of the Basic model works great as a healthy alternative for an HVAC duct liner, to absorb noise that would ordinarily travel through the duct.

Paradise foam also helps reduce the reverberation time in a room when installed behind canvas artwork.

Paradise Foam is available in standard grey and is sold in 24” by 48” panels. Custom colors are also available.

### Applications:

- Noisy Rooms
- HVAC ducts
- Music Rooms

### Installation:

Panels can easily be cut to fit any space and are held in place with a compression fit with many applications. Special adhesive glues can also be applied if required.

### Fire Rating:

UL code 94, electronics:

HBF: Passes

HF1: Passes

VO: Passes

ASTM E 84 Class 1

Flame spread: 5

Comparable to UL 723, ANSI/NFPA No. 255, and UBC No. 8-1

Smoke Density: 45

ASTM 1000.001 (Toxicity Requirements for Smoke Gasses)

pass

ASTM 662-83 (Specific Optical Density of Smoke Generated by Solid Material

pass

ASTM E 162-83

Flame spread index: 22.9

(Surface Flammability of Materials Using a Radiant Head

Flame spread factor: 6.7

Energy Source)

Heat evolution factor: 3.5

### N.O. Units:
