

NOISEOUT

*"Hear the sound, not the noise"*

## NoiseOut™ Millwork with Wire Chase

The NoiseOut™ Millwork is a beautiful architectural element that is designed to absorb, reflect, and/or scatter sound energy. Our Millwork helps reduce the reverberation time within a room. NoiseOut™ Millwork includes such items as crown molding, baseboard, thresholds, ceiling beams, fireplace mantels, wood columns, case trim, and similar surface treatments.

The NoiseOut™ Millwork with Wire Chase also provides an easy method of installing wires without requiring the typical drilling of holes in a wall. The channel or chase conceals wires and cables. The most common application is to conceal low voltage wires and fiber cabling for structured wiring in a home, office, or any facility that has low voltage wiring. The channel provided for the wire chase can be shielded against any RF interference and coated with a moisture barrier.

### Applications:

- Living Rooms
- Dining Rooms
- Home Theaters
- Family Rooms
- Any potentially Noisy Room

### Installation:

NoiseOut™ Millwork is installed just as you would normal millwork

### N.O. Units:

Wood: 1 Unit per linear foot  
Fiberboard: 2 Units per linear foot
